RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2007. OCLC Number: (OCoLC)145505250 Subject: Seismic prospecting -- Utah -- Utah Valley. Excerpt: . . . 10 Miscellaneous High-Resolution Seismic Imaging Investigations in Salt Lake and Utah Valleys for Earthquake Hazards Reflection imaging was exceptional at this site, allowing Fire Training Tower the velocity model interpretation to extend to a depth of about 420 m. Reflections and reverberations are visible throughout The S-wave sounding at the fire training tower was near much of the field data (fig. 13a). The combined reflection and the Advanced National Seismic System (ANSS) seismograph refraction best models are shown in figure 13b. The top of station FTT on mapped Q03 sediments (fig. 1; in this study, refraction-model layer 4 (Vs of about 340 m s) correlates with the abbreviation FTT will denote our site, not the ANSS a reflection at a depth of about 55 m. The final hybrid model station site). Figure 11 shows the interpreted seismic refrac-for the Provo Airport data is shown in figure 8. This site has tion data, sorted by source-sensor offset. Limited space at the lowest S-velocity structure (130 - 340 m s) in the upper 100 the site prevented full reversed-spread refraction shooting at m of any of the investigated minivib sites. far offsets, akin to River Oaks, thus depth of investigation is less than 100 m. The site appears seismically complex and proved initially difficult both to pick and to interpret. Exchange Park Although we attempted reflection processing at this site with field records recorded with the source at every third sensor, Exchange Park (EP, fig. 1) was the second minivib S-no...
