

## Chemical Calculations with Explanatory Notes, Problems, and Answers, Specially Adapted for Use in Colleges and Science Schools

Filesize: 4.45 MB

### ***Reviews***

*Extremely helpful to any or all category of individuals. It really is rally fascinating throgh studying time period. I am just quickly could possibly get a pleasure of reading a composed ebook.*  
*(Lawrence Keeling)*

## CHEMICAL CALCULATIONS WITH EXPLANATORY NOTES, PROBLEMS, AND ANSWERS, SPECIALLY ADAPTED FOR USE IN COLLEGES AND SCIENCE SCHOOLS

DOWNLOAD

To save **Chemical Calculations with Explanatory Notes, Problems, and Answers, Specially Adapted for Use in Colleges and Science Schools** PDF, you should refer to the link listed below and download the ebook or gain access to additional information which are related to CHEMICAL CALCULATIONS WITH EXPLANATORY NOTES, PROBLEMS, AND ANSWERS, SPECIALLY ADAPTED FOR USE IN COLLEGES AND SCIENCE SCHOOLS ebook.

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1896 edition. Excerpt: .are required. Calculate the percentage of chlorine in the specimen. The equations representing the reactions are-- $KClO_3 + 3H_2 = KCl + 3H_2O$ ;  $KCl + AgNO_3 = AgCl + KNO_3$ . Since the mol. wgt. of  $AgNO_3 = 170$ , a normal solution will contain 170 grams in 1 litre of solution; 1 c.c. will contain 0.170 gram  $AgNO_3$ . If the solution is deci-normal, since only--of 170 J 10 grams is dissolved, 1 c.c. will equal 0.0170 gram  $AgNO_3$ . Now 170 grams  $AgNO_3$  will precipitate 35.5 grams of chlorine as  $AgCl$ ;-. 1 c.c. of N  $AgNO_3$  (= 0.17 gram) will precipitate (or is equivalent to) 0.0355 gram of chlorine; and. . 1 c.c. of  $AgNO_3$  (= 0.017 gram) will precipitate (or is equivalent to) 0.00355 gram of chlorine. N In the example given, 26 c.c. of  $AgNO_3$  were used;  $26 \times 0.00355 =$  the weight of Cl, to which they are equivalent; and, since that is obtained from 0.32 gram  $KClO_3$ , the percentage amount is found by the following proportion: --0.32: 100::  $26 \times 0.00355$ : x;  $100 \times 26 \times 0.00355$  oa a. x -----= 26.64: per cent, chlorine. L)-o-Z-Example 6.--100 c.c. of a solution of sulphurous acid required 5-15 c.c. of--iodine solution (1 c.c. = 0.0127 gm.) to completely oxidise it. Find the weight of  $SfX$  per litre of solution.  $SO_2 + I_2 + 2H_2O = H_2SO_4 + 2HI$ . 1 To titrate a solution means to ascertain the titre, or strength, of it by volumetric methods. Since one molecule of iodine...
