

Commercial organic analysis Volume 2, pt. 3 a treatise on the properties, proximate analytical examination, and modes of assaying the various . medicine, with concise methods for the detec

By Alfred Henry Allen

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 206 pages. Dimensions: 9.7in. x 7.4in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: . . . terebeniene, and this name may be conveniently employed to designate the pinene of French turpentine oil. This variety of pinene is laevo-rotatory, while the pinene from American oil usually exhibits dextro-rotation. This difference in optical properties extends to the various compounds and polymers of the pinenes from French and American turpentine oils. Where two physical isomerides of a substance exist, the optical activities of the two varieties are usually equal and opposite. The specific rotation commonly assigned to Isevo-pinene is -40. 4 (-43. 4 being the greatest activity observed), while pinene from American oil of turpentine is stated to have a specific rotatory power of 21. 5 for the sodium ray. From these figures it would appear that one or other of the pinenes is not a homogeneous substance. J. H. Long has proved this to be the fact with respect to the product from American turpentine...
